Angular 6 cli commands cheat sheet

Cheatography

Cisco CLI Comprehensive Commands II Cheat Sheet
by Mary F. Smith (boogie) via cheatography.com/86236/cs/21456/

Configure DHCP Server

R1> *enable*	
R1# *configure terminal*	
R1(config)# *int f0/0*	
R1(config-if)# *ip address 10.1.1.2 255.255.255.0*	
R1(config-if)# *no shut*	
R1(config-if)# *copy run start*	
R1(config-if)# *exit*	
R1(config)# *ip dhcp pool Development*	Development is the name of the pool
R1(dhcp-config)# *network 10.1.1.0 255.255.255.0*	this is the network IP addresses will be assigned from
dhcp server ip MUST be on the same subnet as router IP	
	Other Misc DHCP Configuration
R1(dhcp-config)# *defau-lt-router 10.1.1.2*	default gateway
R1(dhcp-config)# *dns-s-erver 10.1.1.2*	this will normally be another server on your network
R1(config-if)# *lease 7*	choices are number of days or infinite
R1(dhcp-config)# *ip dhcp excluded-address*	*this can be a range i.e. 10.1.1.5 10.1.1.11
R1(dhcp-config)# *domain-name ats.coop*	
R1(config-if)# *option XX*	
	10.1.1.2 static assignment
R1(dhcp-config)# *exit*	
ip dhcp helper-address	

ip helper-address 192.168.1.245 [ip address of dhcp server] - ids the dhcp router and allows broadcast UDP traffic for dhcp assignment

int f0/0
ip helper-address 192.168.2.245

Verify DHCP

R1(config-dhcp)# *show ip pool*	
R1(config-dhcp)# *show ip lease*	
R1(config-dhcp)# *show ip binding*	allocated addresses

NAT

ip nat pool name [first IP] [last IP] net [subnet mask]	defines the pool of public addresses to use
ip nat inside source list [acl#] pool name overload	enables PAT & specifies which ACL is being translated to which NAT pool
ip nat inside	identifies inside interface (int config)
ip nat out	ip nat outside
ip nat in s st 192.168.1.10 209.165.200.18	configures static NAT mapping
sh ip nat s	show ip nat statistics
show ip nat statistics	show ip nat translations

Configure DHCP Client

R1> *enable*	
R1# *configure terminal*	
R1(config)# *int f0/0*	
R1(config)# *mac-address aaaa.bbbb.cccc*	
R1(config)# *ip address dhcp*	
R1(dhcp-config)# *domain-name*	
R1(config)# *no shut*	
R1(config-if)# *ip dhcp cilient-id ascii PC2*	allows a user friendly id to be assigned to a host
R1# *show dhcp lease*	displays leasing information

Cheatography

Angular CLI Cheat Sheet
by jakblak via cheatography.com/61771/cs/15929/

Setup

npm i -g @angular/cli	Install latest version
ng -v	check your CLI version
ng --help	show all commands in terminal
ng doc (component)	open Angular documentation

Main Commands

ng new	ng new myApp	create a new project
ng serve	ng s -o	compile and open
ng generate	ng g	create new component/route/service
ng build	ng b	build for deployment in dist folder
ng test		test spec files
ng e2e	ng e	end-to-end tests
ng lint	ng l	run linting
ng update		Identify dependencies to update
ng add		add libraries like Material

Common Flags

COMMAND	FLAG	ALIAS	DESCRIPTION
All	--help		list flags (new/g)
All	--dry-run	-d	show potential file changes
New	--skip-tests	-S	no spec files
New	--skip-install		don't install dependencies
New	--prefix	-p ng	prefix for *all* selectors
New	--skip-git	-g	don't add git
New	--style scss		set up using SASS
New	--routing		generates routing module
Serve	-prod		run from production
Serve	-open	-o	opens in browser

Notes

Certain *Blueprints* (**components/modules**) create a **folder** - unless a folder has already been created. Use the *--flat* flag to prevent a folder from being created. **Service & Interface** do not create folders.

Remember to consider **where components should reside.** You may want to add a login component inside an account module. This would be done by first creating the module *ng g m account --routing* then adding the login component inside account and importing it the correct module *ng g c account/login --m=account*

Yarn vs NPM

Enable Yarn	*ng config -g cli.packageManager yarn*
Enable NPM	*ng config -g cli.packageManager npm*

ng update

ng update @angular/core	update core/rxJS/TScript
ng update @angular/material	update Material

ng add - Schematics

ng add @angular/pwa	app manifest + service worker
ng add @ng-bootstrap/schematics	add ng-Bootstrap
ng add @angular/material	install Material
ng add @clr/angular@next	install Clarity Design

Material Schematics

ng g @angular/material:material-nav --name=nav	Nav Menu
ng g @angular/material:material-dashboard --name=dash	Cards
ng g @angular/material:material-table --name=table	Table

Makes it easy to add and update 3rd party libraries.

```

It is a work in progress and is not finished yet.npm i -g @angulÃÂar/cli˜ÃÂ§Â Install latest versionng -v˜ÃÂÂ check your CLI versionng --help˜ÃÂÂ show all commands in terminalng doc (compoÃÂnent)˜ÃÂÂ open Angular documeÃÂntation ng newng new myAppcreate a new projectng serveng s -ocompile and openng generateng gcreate new componÃ-ÂentÃÂ/roÃÂuteÃÂ/seÃÂrviceng buildng bbuild for deployment in dist folderng testÃ Âtest spec filesng e2eng eend-to-end testsng lintng lrun lintingng updateÃ Âidentify dependÃÂencies to updateng addÃ Âadd libraries like Material COMMANDFLAGALIASDESCRIÃÂPTIONAll--helpÃ Âlist flags (new/s/g)All--dry-run-dshow potential file changesNew--skipÃÂ-tests-Sno spec filesNew--skipÃÂ-inÃÂstallÃ Âdon't install dependÃÂenciesNew--prefix-p ngprefix for all selectorsNew--skip-git-gdon't add gitNew--style scssÃ Âset up using SASSNew--routingÃ Âgenerates routing moduleServe-prodÃ Ârun from productionServe-open-oopens in browser Certain Blueprints (componÃÂentÃÂs/mÃÂodules) create a folder - unless a folder has already been created. componentcservicespipepinterfaceimodulemclassclass--flatÃ Âdon't create a folder--spec false-Sno spec files--inliÃÂne-ÃÂstyle-sno CSS files--inliÃÂne-ÃÂtemÃÂplate-tno HTML files--skipÃÂ-importÃ Âdon't add to module--dry-run-dreport files, don't write-m-mspecify which module to import intoBlueprints - The concept angular uses to generate code. Once that's done, open a terminal at that location and use the commandto generate a new project. Use the --flat flag to prevent a folder from being created. So creating three (or four with tests) new files every time you need a new component seems like an impossible task.That is why the angular-cli can create these files for you.To do this, you can use the ng generate command.For example, if you need a new component, you could open a terminal at the desired location and use theng generate component [name]command to generate all the files you need to create a ecearres nigool Wentnua M- nigol / tâh.Thils Os Dedda Tnuocmoc Weyclof Mags Deojne uoy epoh I.s Rof, TNENOPMOC A ROF Seli O Gnitaerc Row Iht Iht IH Donil, Uoy Rof Tehs Taehc Siht EDAM IS .eielihw om Noitallatsi EHT.enenihcam Key Rofg- ILC / Rlowtra ethimelloof ethmillief ETH ETSAP es from, the odt uoy oy lla .tluafted yb tnegoopmo rof seler-sss Tottaer Eti Esas - No.Sto Wen Gn: NoitPo Strite-Picks--@ht gniui yb tset etaercter don eh.yawya DDEEN SOMU KEY GNRORETULC Eapa Dna Eca Ekat Hikaht.tenopmoc YRve Rof's ULC @kat EVAECT UNY FIMT F.LPMax Rof Gnihtemos Omed Ro Yt Eter Trejorp Wen a Gnitaer.mt deen t'nod tsuj uoy owa nur ova nht ovah an ovah ovah ovah oy, Osla: Outs some tcejorp Alley fo Tour etho MESIA NC UY.Emit lalatsi see yllerexe llatsi taya ta, Gaphs Niht Htew NoitacpPa Wen a etaerc Uoy Nihw, from taht Esuaceb, Revenwa Sa, uoy redlof wen a etareneeg llw ilc eht.tnenopmoc to to account moduleng g i modelsÃÂ/personnew person Interface added to modelsng new myApp -S -g --routingnew project no spec or git w/ routing angular Your Download Will Begin Automatically in 5 Seconds.Close Angular CLI (Command Line Interface) is one of the powerful tool that allows you to perform a lot of actions in an Angular project by using simple commands.We can use the CLI tool directly in a command shell, or indirectly through an interactive UI such as Angular Console.Ã The Best Advantage is that, can avoid manual process to create lot of stuff like create components, directives, feature modules, services... You can find a list of all supported style-extensions at the official angular-cli-wiki.ng new example --style scss ng generate: Generate components using the Angular CLIGenerating working angular application with just one command is pretty convenient isn't it?But the angular CLI can do so much more!You have created a new project and started developing. You can create a whole bunch of different angular-blueprints by replacing component by one of the following.class directive enum guard interface module pipe service ng serve: Run your app with just one commandOnce we are done creating and developing our angular application, we also want to test and run it.Fortunately doing so is very easy as well, thanks to the CLI.All we need to do, is to open a terminal at the root of our project and use the commandto start our application in development mode.It will also watch the directory of our application for changes.This is an affiliate link. ng new: Generate new angular projectsThe command we used above is not the only way to create a new angular application.In fact, the command itself as a ton of options, that are all controlled via additional flags.This is an affiliate link. This can actually take some time. Do not use this small web-server in an production environment!Building to files using ng buildWhen you are li odnegnuigga iop gnituor-- tnuocca m g gn oludom li odnaerc amirp ottaf ebberrev otseuQ .otnemom isaislauq ni ellaps ella olraicsal id erediced iouP .teehs taehc id azzob anu ¨Ã atseuQ moc.yhpargotaehc//:sptth yhpargotaehC .elif ¹Âip id ongosib eterva evod ,otnup la erinev rep opmet otlom Ãrrov ic noN .enoizacilppa aut al rep elif yrotcerid anu ereilgecs atsab :olraf eliciffid ottaffa ¨Ã noN)ecafretnI eniL dnammoC(ILC al noc eralogna ppa amirp aut al eraerc id otnemom li ¨Ã ossedAILC eralogna ppa amirp aut al aerC .elosnoc alla ottaf ebberva ehc ²Âic ottut Ãrepmats ecevnI .ILC idnamoc i onos ilauq e ILC otnemurts ol erallatsni emoc ,omaideV Ã.resworb len enoizacilppaâl anroigga e etnegros ecidoc led elif i etnemacitamotua alipmociR Ã.cte .ottegorp led eznegise ella esab ni eralogna maet lad ataicsalir enoisrev isaislauq o enoisrev amitluâl erallatsni id odarg ni omaiS .accolb iv non ilc-ralugnaâl ehc ¨Ã odnamoc otseuq id elapicnirp otnup lI.arpos otalrap omaibba iuc id Ãtilanoiznuf edomoc el ettut id otipacs a ,elibissop Ãtilibisself amissam al eteva odom otseuq nI.kcapbew us ollortnoc oneip li eteva aro ,onafoc li ottos kcapbew euqnumoc avazzilitu ILC al ertneM bew nu Ãreerc e ottegorp li rep ILC al Ãretilibasid ehc odnamoc li erasu ²Âup is osac otseuq nI.ILC al noc ilibazzilaer onos non ehc iranecs inucla arocna icresse orebbertop aM.elibisself ¹Âip erpmes otatnevid ¨Ã ilc-ralugnaâl ,onna omitluâlled osroc leNdrocpir li erariT :tceje gn :otseuq emoc dorp-- galf li erasu ,otseuq eraibmac reP .oppulivs id esaf ni arocna ¨Ã ppaâl ,odnamoc otseuq odnazzilitU.)tluafed(»Âtsid«Â atamaihc yrotcerid anu ni tuptuoâl Ãrenoizisop e enoizacilppa artsov al acsiurtsoc ILC al ehc ¬Ãs Ãraf odnamoc otseuQ.odnamoc li erasu omaissop ,opocs otseuq a irassecen elif i erenetto reP.bew revres nu us alriubirtsid id otnemom li ¨Ã ,eralogna ppa artsov al noc component inside account and importing it the correct module ng g c accounÃÂt/login -m=account. If you don't want to change them manually every time, you can use the --style scss option to tell the CLI that you want to use Sass.But not only Sass-files (.scss) are supported. Make sure to replace [project-name] with a actual project name of your choice.The CLI will now go ahead and create a new directory named just like the project.Inside of that folder, it will create all the files for a basic but already executable angular application.It will also install all required external dependencies. We will look into the CLI commands list.List ofÃ Â CLI CommandsÃ Âng generate : Generates new angular code components.syntax :Ã Âng generate application [application name] [options].example :Ã Âng g application application-name -dryRunng new :Ã ÂGenerates new angular project.syntax :Ã Âng new projectname [optionswithflag].example :Ã Âng new testproject -dryRun=true CommunityTutorialsQuestionsWrite for UsHacktoberfestToolsProductsHomepagePricingProduct OverviewMarketplaceCustomersControl PanelDocumentationContact SupportContact SalesSign in Setting up a new project and creating all these files for every new component can take a lot of time.It is tedious work that takes a lot of fun from the development process.Fortunately, there are tools like the angular-cli, that can do all that hard work for you!This is an affiliate link.
